Received: January 22, 1992

**Abstract.** The paper presents the results of position photographing of minor planets carried out at the Skalnaté Pleso Observatory in the years 1976-1977. 97 observations of 12 minor planets are given.

**Key words:** asteroids – astrometry

## 1. Introduction

The presented paper is a continuation of the previous papers which gave the results of positional observations of minor planets obtained at the Skalnaté Pleso Observatory (Svořen, Pittich; 1991). The observations made in the years 1976-1977 are included. The reduction constants as well as methods of observation and processing and all the other necessary data are not repeated here. They are given in the paper on cometary astrometry in this volume (Svořen, 1992).

A list of collaborators are given, together with their share in photographing, measuring and reducing the positions.

## 2. Positions of minor planets

The data have been arranged according to serial numbers of minor planets. The individual columns of the table contain the following:

N - ordinal number of observation,  
MP - number of minor planet,

---

Contrib. Astron. Obs. Skalnaté Pleso 22, (1992), 49– 53.

Date U.T. - date and time of the middle of the exposure,

*R.A.*<sub>1950</sub> - right ascension for equinox 1950.0 (in h,m,s),

*Decl.*<sub>1950</sub> - declination for equinox 1950.0 (in °, ′, ″),

A - the difference between independent determinations of R.A. in arc seconds,

B - the difference between independent determinations of Decl. in arc seconds,

Notes: N. 61 - black plate, N. 65, 66, 69, 70 - measurement difficult.
