Received: January 10, 1994

**Abstract.** The paper presents the results of position photographing of minor planets carried out at the Skalnaté Pleso Observatory in the year 1981. 73 observations of 11 minor planets are given together with the list of reference stars and dependences.

**Key words:** asteroids – astrometry

## 1. Introduction

The presented paper is a continuation of the previous papers which gave the results of positional observations of minor planets obtained at the Skalnaté Pleso Observatory (the last paper of this series: Svoreň, Pittich; 1993) and contains the observations made in the year 1981. The reference stars were selected from the Smithsonian Astrophysical Observatory Star Catalog(1966). The reduction constants as well as methods of observation and processing and all the other necessary data are not repeated here. They are given in the paper on astrometry of comets in this volume (Svoreň, 1994).

A total of 73 accurate positions of 11 minor planets are given. The list of collaborators is given, together with their share in photographing, measuring and reducing the positions.

## 2. Positions of minor planets

The data have been arranged according to serial numbers of minor planets. The individual columns of the table contain the following:

N - ordinal number of observation,

MP - number of minor planet,

Date U.T. - date and time of the middle of the exposure,

$R.A._{1950}$  - right ascension for equinox 1950.0 (in h,m,s),

---

Contrib. Astron. Obs. Skalnaté Pleso **24**, (1994), 125– 133.

*Decl.*<sub>1950</sub> - declination for equinox 1950.0 (in °, ', '' ),

A - the difference between independent determinations of R.A. in arc seconds,

B - the difference between independent determinations of Decl. in arc seconds.

Notes:

N. 9, 10 - bad seeing, N. 13 - poor guiding.

### 3. Reference stars and dependences

The individual columns of the table contain the following:

N - ordinal number of the observation in agreement with the Section 2,  
 Numbers of reference stars and dependences (SAO catalogue of reference stars  
 is used at all the calculations),

T - the exposure time in minutes.

N	Numbers of stars and dependences						T
