Received: December 21, 2004

**Abstract.** The paper presents the results of position determinations of minor planets carried out at the Skalnaté Pleso Observatory in the year 2003. 108 CCD observations of 16 minor planets are given together with the list of reference stars.

**Key words:** astrometry – asteroids

### 1. Introduction

The presented paper is a continuation of the previous papers which gave the results of positional CCD observations of minor planets obtained at the Skalnaté Pleso Observatory (the last paper of this series: Neslušan, 2003) and contains the observations made in the year 2003.

The reference stars were selected from the USNO-A2.0 Star Catalog (Monet et al., 1998).

The reduction was made using the method of plate constants within computer program *Astrometrica* (Raab, 1993).

A total of 108 accurate positions of 16 minor planets are given. A list of reference stars and a list of collaborators are included, too. The list of collaborators informs about their share in exposing, measuring, and reducing the positions.

### 2. Positions of minor planets

The data have been arranged according to serial numbers of minor planets. The individual columns of the table contain the following:

N – serial number of observation,

MP – number of minor planet (if unnumbered, yet, the preliminary designation is given in parentheses),

Date U.T. – date and time of the middle of the exposure,

R.A.<sub>2000</sub> – right ascension for equinox 2000.0 (in h,m,s),

Decl.<sub>2000</sub> – declination for equinox 2000.0 (in °, ', "'),

d $\alpha$  – the mean residual in R.A. in arc seconds,

d $\delta$  – the mean residual in Decl. in arc seconds.

### 3. Reference stars

The individual columns of the table contain the following:

N – serial number of the observation in agreement with the Section 2,

Numbers of reference stars in the USNO-A2.0 Star Catalog,

$\Delta\alpha$  – the O–C difference in R.A. in arc seconds,

$\Delta\delta$  – the O–C difference in Decl. in arc seconds.

The position of each reference star in the field of other reference stars is determined within the used method of plate constants.  $\Delta\alpha$  and  $\Delta\delta$  are the differences between observed (O) and calculated (C) coordinates. Except of a common measurement error, these differences are caused by an inaccuracy of position of a given star in the catalog and by the time shift between the catalog and considered epochs.

N	Number of star	$\Delta\alpha$	$\Delta\delta$	Number of star	$\Delta\alpha$	$\Delta\delta$
